easy fit hinge system

➡ next

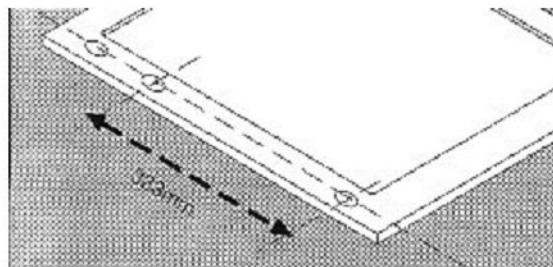

The Easy-Fit Hinge System is a simple device that will allow for a standard kitchen fascia to be installed in front of a freestanding washing machine, tumble dryer, slimline fridge, freezer or dishwasher.

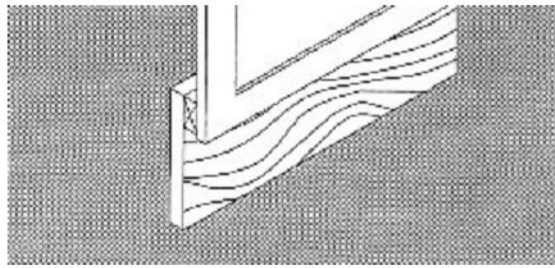

A standard 600mm door fascia can be used, mounted left or right hand. The Easy-Fit hinge comes complete with bracket, hinges, doorstop and all fixings needed.

It is recommended that a 650mm wide worktop is used, but in some situations a 600mm worktop will be satisfactory and allow adequate space for the Easy-Fit hinge and fascia to be fitted in the correct line (check the depth of the appliance to determine which will be suitable). If extra ventilation is required (see manufacturers recommendations), a grille may be installed in either the plinth or the back of the work surface.

Where a full-height door is to be used, a further 35mm hinge hole is required to be drilled at 333mm centres as above diagram.

Where the Easy-Fit hinge is to be used for a slim-line fridge, freezer or dishwasher, a spacer will be required to attach the plinth to the fascia, to open in one action.
